Day,

I apologize for the confusion on my part. I read the requirement backwards from what you intended. I will see what we can do to accommodate Dr. Watson's schedule. The main problem will be having all Atlanta staff available since some leave for the day at 3 pm eastern time, which is 2 pm Texas time.

Richard

Richard, when I communicated those three dates and times that Dr Watson was available, I stated that it needed to be later than the time you are proposing because she is a professor who teaches in the mornings; however, since her times apparently do not work for your team, I will get back with her and see if she can find a way to get out of class at the time you suggest. If not, we will continue working to find a time that can work for your team and her. Thanks, Day

Hello Day,

It seems that the best time and day for agency staff to attend a conference call with Dr. Watson is January 24 at 9: AM Pacific Time, 11:00 am Texas (Central) Time, Noon Eastern Time. We need to end before 10:30 AM Pacific time to accommodate other appointments.

We can use the ATSDR Region 10 conference line:

Toll free **non-responsive** Passcode **non-responsive**

ATSDR headquarters (Atlanta), OHA, and EPA staff will be attending the call, in addition to myself.

Our role in this call will be to listen to Dr. Watson and ask her questions. We look forward to hearing from her. Would you please let Dr. Watson know that we are very interested in her thoughts on how her research can best be used or applied to the exposure investigation we are performing in your community?

Thank you,

Richard

Subject:

Richard, Karen, Jae, and the rest of the team doing the study related to Triangle Lake pesticide exposure:

The first scientist that will participate in a teleconference with your team members will be Dr Cheryl Watson. She is a leading recognized authority on two topics and will be speaking on those topics to you and answering any questions you want to ask: 1) New cutting-edge evidence that small doses of pesticides, especially endocrine disruptors, are more dangerous than previously believed. While regulators typically focus on monotonic responses, she will describe startling new evidence that non-monotonic responses are also very important. 2) She will describe her latest research which is on the dangers of the additive effect of more than one pesticide in a concoction.

I NEED YOUR TEAM TO CHOOSE ONE OF THE FOLLOWING THREE DATES AND TIMES THAT WORK FOR DR WATSON:

Jan 19, Jan 24, or Jan 26, starting no earlier than 12 noon Oregon time, which would be 2 p.m. her time (Texas; she teaches and does research at a university), and lasting for 90 minutes.

Richard, can you please be the point man for organizing your 'team' and finding out which day works best for the most significant participants. It would also be great if one or more of the folks in Atlanta can participate.

ONE MORE THING: We are hearing that Oregon Department of Forestry is refusing to comply with the original request/demand for records. Link Smith of the ODF office in Vanta told me that, among other things, they do not want to have to produce records for as much territory as in the original request/demand. Please provide clarification on this issue as it is sweeping through our community like wildfire and people are about ready to head to the ODF office with signs and call the media! SPEAKING FOR DOZENS OF COMMUNITY MEMBERS, OUR POSITION IS THAT WE DO NOT WANT YOU TO CAVE-IN TO THEIR ATTEMPT TO DECREASE THE EXTENT OF THE ORIGINAL RECORDS REQUEST. Thanks, Day Owen
